ASSESSMENT (11-09-26)

Topic Name: Structuring a basic Python conversational loop

TASK :

Build a simple rule-based conversational chatbot in Python. Your chatbot must interact continuously with the user, recognize different messages, provide appropriate responses, and allow the user to exit.

```
name = input("What is your name: ").lower().strip()

while True:
    message = input("You: ").lower().strip()
    if "exit" in message or "bye" in message:
        print(f"Bye {name}")
        break
    elif "hello" in message or "hi" in message:
        print(f"Hey there {name}")
    elif "joke" in message:
        print("That's great. Take a spoon and fill it with water.")
        print("Then jump into that 🤪")
    elif "how are you" in message:
        print(f"Thanks for asking....❤️ How are you Mr. {name}?")
    else:
        print("Sorry I can't hear you. Try with another message")
```

OUTPUT:

```
What is your name: Prabhu Ram
You: how are you
Thanks for asking....❤️ How are you Mr. prabhu ram?
You: Tell me a joke
That's great. Take a spoon and fill it with water.
Then jump into that 🤪
You: hello
Hey there prabhu ram
You: how do you know me
Sorry I can't hear you. Try with another message
You: bye
Bye prabhu ram
```
